ABOUT

I'm a Software Engineer at AionOS with 3.5+ years shipping production AI/ML systems, enterprise SaaS platforms, and real-time voice infrastructure. I currently own UniWeave — a 17-repo, multi-tenant voice-AI platform — end to end: architecture, security, and telephony. IIT Roorkee, Integrated M.Tech.

01

Voice AI & Telephony

Root-caused a LiveKit/SIP bug across 8 upstream releases; built real-time audio bridges for Twilio, CZentrix, and Genesys.

02

Security Engineering

Closed 13 vulnerabilities in a platform-wide RBAC hardening sprint; migrated JWT signing with zero downtime.

03

Computer Vision

Architected a 9-analysis-type CV platform and a dual-pipeline face-ID system at 95%+ accuracy.

04

Full-Stack & Infra

FastAPI, Node, React/Next.js, Azure & GCP — ships 15,000+ lines of production code a month.

FEATURED WORK

UniWeave

17-repo enterprise voice-AI SaaS platform, sole technical owner.

LIVEKIT

RBAC

JWT

Saudia Voice AI

Enterprise multilingual voice assistant, Microsoft-sponsored.

AZURE OPENAI

TWILIO

PINECONE

IntelliVision

9-analysis-type computer vision platform, solo-architected.

FASTAPI

YOLOV8

CELERY

IntelliVideo

Video intelligence and person-identification MVP.

DEEPFACE

FAISS

IndiaAI Face Auth

Government of India duplicate-detection challenge.

FACENET

NUMPY

Expanded case-study state for UniWeave shown below ↓

UniWeave — case study

EXPANDED VIEW

PROBLEM

17-repo multi-tenant platform, zero handoff documentation, cross-org data isolation not guaranteed.

APPROACH

Became primary owner in 2 weeks; ran an RBAC hardening sprint; led a 4-service backend consolidation and a zero-downtime JWT migration.

STACK

LIVEKIT

NODE/TS

POSTGRESQL

REDIS

OUTCOME

13 vulnerabilities closed, full tenant isolation, 245+ files consolidated verified byte-for-byte.

EXPERIENCE

FEB 2025 – NOW

Software Engineer AionOS

Sole owner of UniWeave; also shipped Saudia Voice AI, IntelliVision, IntelliVideo.

JAN 2024 – JAN 2025

Software Engineer ARThink AI

QuadzAI chatbot platform, OnFit AI healthcare PWA.

JAN – SEP 2023

Junior Software Engineer SRM Software Inc

HR workflow automation, Angular frontend.

2020 – 2022

Full-stack Intern (multiple) Zixwer, Bechho, Tradebuilder +2

E-commerce, fintech, healthcare, EdTech.

What's real vs. staged here

- Everything above is live: backdrop-blur glass over a fixed, full-page ambient glow (this is the fix from the previous version — the glow now spans the entire scrolling page, not just the hero, so every card genuinely has something colorful to blur), the cursor-reactive grid spotlight, magnetic buttons, 3D card tilt, hover edge-sweep, and scroll-triggered count-ups all actually run — move your cursor and scroll to feel it.
- In the Next.js build, the same behaviors get re-implemented idiomatically: Framer Motion for the magnetic buttons, tilt, and hover sweeps; GSAP + ScrollTrigger for the count-ups and any scroll-pinned sequences — this demo uses plain JS/CSS only because it's a standalone preview file.
- The boot sequence, glow drift, spotlight, tilt, and magnetic effects all disable cleanly under `prefers-reduced-motion`.
