

Two directions. Same content, opposite temperament.

Neither is a default template. Both are built specifically around your work — voice AI, telephony, and systems engineering — just at opposite ends of restraint vs. energy. Pick one, or tell me which elements of each to merge.

A — Signal

QUIET • PRECISE • OBSERVABILITY

Dark, near-black, one teal accent spent sparingly. Looks like the telemetry dashboards you actually build. Reads as: serious, precise, already senior.

Best if: **you want the calmest, most "already-operating-at-this-level" read.**

B — Dispatch

BOLD • KINETIC • BROADCAST ENERGY

Bright paper, huge black type, one electric blue spent boldly in flat blocks. Named for the moment a call gets dispatched. Reads as: confident, memorable, energetic.

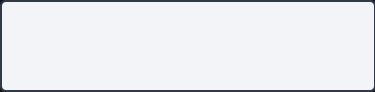

Best if: **you want to be the portfolio a recruiter actually remembers by name.**

A dark, precision aesthetic for a voice-AI engineer

Instrument Sans + JetBrains Mono. One accent, spent once. Motifs borrowed from telemetry and call logs, not decoration.

01 Palette

6 tokens

 Ground #0A0B0D Page background — deep, not pure black.	 Surface #12151C Panels, cards, nav.	 Ink #F2F4F7 Primary text, off-white.
 Ink Muted #7C8797 Captions, secondary copy.	 Signal #2DD4BF The one accent — links, CTA, active state.	 Indicator #E8483A Live/recording state only, broadcast convention.

02 Type

Instrument Sans • JetBrains Mono

06 Motion notes

static comps above, behavior below

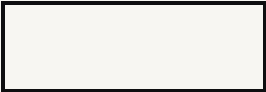

- Hero: headline/subhead fade-and-rise in on load (Framer Motion, staggered ~80ms); waveform bars loop a gentle height pulse continuously.
- Impact strip: numbers count up from 0 on scroll-into-view (GSAP ScrollTrigger + a numeric tween).
- Project cards: staggered fade/rise on scroll-into-view; subtle lift + border-color shift to Signal teal on hover.
- Timeline: items reveal progressively as the section scrolls (ScrollTrigger scrub).
- Status-chip dot and Live-indicator dot: slow opacity pulse, looping.
- All of the above respect prefers-reduced-motion — replaced with an instant, static state.

A BOLD, KINETIC IDENTITY BUILT FOR A CALL THE MOMENT IT COMES IN

Archivo Black + Work Sans + IBM Plex Mono. Flat electric blue spent boldly.
Named for the instant a call gets dispatched to an agent.

06 Motion notes

static comps above, behavior below

- Tech-stack ticker: continuous horizontal scroll, right-to-left, seamless loop (GSAP xPercent tween, repeat:-1).
- Hero load: headline "flickers" into place in 2–3 quick frames, like a dispatch console receiving a call — a fast, snappy reveal, not an easing float.

- Project rows and buttons: instant color-invert on hover, no transition easing — the point is a snap, not a glide.
- Impact strip: numbers count up fast and land hard (short duration, sharp ease-out).
- Timeline: rule lines draw themselves left-to-right on scroll-into-view.
- All of the above respect `prefers-reduced-motion` — replaced with an instant, static state.
